

2017 MAINTENANCE SECTION REFERENCE BOOK

REVISED: 10/01/17

Prepared by:

State Maintenance Engineer's Office

PREFACE

This book uses the Highway Features Planning Tool as the foundation for roadway information. It also includes the following information:

- Maintenance crews
- Maintenance sections and breaks by crew
- Shop locations
- Port of Entry locations
- Rest Area locations
- Seasonal road closure locations
- Road closure gate locations (**NOT including gates on ramps**)
- Road Weather Information System (RWIS) sensors
- Variable Message Sign (VMS) locations
- Structure ID's [#; *] ID#; * *structure type or lane*
- Federal Roadway Classifications by number
- At grade railroad crossing ID numbers
- Variable Speed Limit Sign (VSL)
- WYO-Link tower sites
- Airport maintenance sections

PURPOSE

The WYDOT Maintenance Section Reference Book provides a snap shot reference of maintenance sections by county, key locations by reference markers (RM), routes, main line (ML) number and maintenance section maps by county with routes identified by road classification. This book also includes statewide location information for the following WYDOT facilities:

- Offices and shops
- Rest areas and information centers
- Ports of entry
- Airports
- Remote facilities
- Road weather information system (RWIS) sites
- Radio tower sites
- Interchange layouts

REFERENCE MARKER SYSTEM

The WYDOT reference marker system is used to establish a uniform method of highway designation that provides detailed information and is useable by all WYDOT divisions. Enforcement agencies use the markers to help report highway accident or incident locations and highway travelers refer to the markers as a location reference.

Reference markers should be placed at one mile increments along each route and at all of the following locations:

- **State route intersections**
- **District boundaries**
- **County lines**
- **State lines**
- **Place names (unincorporated)**
- **Major structures**

INSTALLATION

On interstate and multilane highways, reference markers are installed in each direction of travel. Reference markers on the southbound or westbound roadways are installed in descending order and reference markers in the northbound or eastbound roadways

are installed in ascending order. Reference marker installation is based on distance measurement on the northbound or eastbound roadways. The reference marker for the southbound or westbound roadways will be installed directly opposite the northbound or eastbound markers. Zero distance begins at the south and west Wyoming state lines or at the south and west terminus points where routes begin within Wyoming.

On two-lane highways, reference markers are installed on the right side of the roadway with a marker mounted on a post to face each direction of traffic.

Reference markers are installed in line with delineators or two feet back from the face of any curb if no sidewalk exists.

Reference marker placement at structures may be placed at the beginning of the structure in each direction of travel. Stenciled markers should also be used on a structure where possible.

If a reference marker cannot be installed in the correct location, it may be moved in either direction as much as 50 feet. If the reference marker cannot be placed within 50 feet of the correct location, it should be omitted.

The WYDOT Planning Program should be notified when a reference marker is omitted so that map corrections can be made.

EQUATIONS

This book shows equations when necessary. Equations are typically the result of a new alignment. The **AHEAD (AH)** and **BACK (BK)** reference markers are installed at the first full location point on either side of an equation location. When a construction project lengthens a route by one or more miles, **BACK (BK)** reference markers should be placed with the first set of duplicate reference marker numbers.

When reporting an accident or anything else regarding a portion of road with an equation, it is important that the equation designation AH or BK be included with the reference marker number. This way a location will be correctly identified.

MAPS

District maps are included in this book with colored routes that show each district's level of snow removal service according to the district's snow removal plan.

County maps are also included in this book with colored routes that show highway functional classes. Maintenance QA/QC groups the twelve highway functional classes as determined by the WYDOT Planning Program into five groups as shown below:

Maintenance QA/QC Highway Functional Class Groups	
Group	Description & Color on Map
I	#1 Rural and #11 Urban Interstate (gray)
II	#14 Urban Principal Arterial Other & #12 Urban Principal Arterial Other Expressway (NHS) (red)
III	# 16 Urban Minor Arterial, #17 Urban Collector & #19 Urban Local (non NHS) (green)
IV	#3 Rural Principal Arterial Other (NHS) (brown)
V	# 6 Rural Minor Arterial, #7 Rural Major Collector, #8 Rural Minor Collector & # 9 Rural Local (non NHS) (blue)

BOOK UPDATES

All portions of this book are kept as current as possible. Please notify the State Maintenance Engineer's Office if you find errors and omissions that need to be corrected in future publications.

ABBREVIATIONS

The following list of abbreviations is used in the location descriptions for maintenance sections:

Description	Abbreviation	Description	Abbreviation
