

**WYOMING DEPARTMENT OF TRANSPORTATION  
ROAD DESIGN MANUAL**

**Preface**

(Revised 2019 MAY)

This manual, along with the WYDOT Design Guides 2014, the latest AASHTO “*A Policy on Geometric Design of Highways and Streets*”, the AASHTO *Roadside Design Guide*, WYDOT Basic and Operating Policy, and other referenced WYDOT publications, represents the latest “state of the practice” information for road designers in preparation of contract plans and documents for WYDOT projects. This manual is a work in progress and currently may not contain all material found in earlier Road Design Manuals, Procedures Manuals and Highway Development Memorandums. Those former documents no longer necessarily represent current design practice and reference to those older documents should be done with great care and consultation with WYDOT design professionals.

This manual is only available for distribution electronically through the WYDOT website. Revision dates are shown in the left margin of the table of contents and in the downloadable file names. It is recommended to periodically review the website for changes.
